DETAILED ACTION

Application status: Priority

1. An application in which the benefits of an earlier application are desired must contain a specific reference to the prior application(s) in the first sentence of the specification of in an application data sheet (37 CFR 1.78(a)(2) and (a)(5)). The specific reference to any prior nonprovisional application must include the relationship (i.e., continuation, divisional, or continuation-in-part) between the applications except when the reference is to a prior application of a CPA assigned the same application number.

2. The claims are allowable over the prior art but are rejected on grounds of obviousness double patenting.

Double patenting obviousness type

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-24 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-22 of U.S. Patent No. 6,428,964 in view of Hyldig-Nielsen et al. (5,985,563). Although the conflicting claims are not identical, they are not patentably distinct from each other because the application claims differ from those of the patent only in the new limitation "peptide" on the nucleic acids that hybridize to the target nucleic acids wherein new claims 23 and 24 are obvious variants of the earlier claimed method. However, the use of peptide nucleic acids for hybridization to target nucleic acids was routinely practiced in the art for the

benefit of their increased stability of hybridization, even of shorter nucleic acid probes, their relative insensitivity of pH and salt concentration and their greater resistance to nucleases in biological samples as taught by Hyldig-Nielsen et al. (column 2, lines 35-58).
